DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1 and 2 are rejected under 35 U.S.C. 102(b) as being anticipated by US Patent 3,639,998 to Mason.

3. Mason teaches a lint filter for a clothes dryer comprising rotatable drum 12, micro-filter 18, input pathway 16 coupled to sensor 31a for determining the airflow in the pathway prior to entering filter 18, exhaust pathway 19 coupled to sensor 32a for determining the airflow in the exhaust pathway just beyond filter 18, controller 37 in communication with sensor 31a and 32a for detecting a change in the airflow between the first and second sensors and determining if filter 18 is restricting airflow, and alarm 40 in communication with controller 37 for signaling a build up of lint in the filter 18 to a user. Note column 2, lines 40-61; column 3, lines 12-69; and Figure 3.

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Harpenau, Berry, III, Futa et al., Bashark, Dongelmans, and Stein teach similar blocked filter detection systems.
